

Abstract

An aromatic liquid-crystalline polyester having a small dielectric loss in a wide frequency region is provided. An aromatic liquid-crystalline polyester is provided that can manufacture a film having a small volume expansion by heating. An aromatic liquid-crystalline polyester substantially comprising a repeating structural unit originating in 2-hydroxy-6-naphthoic acid 30 to 80 mol%, a repeating structural unit originating in aromatic diol 35 to 10 mol%, and a repeating structural unit originating in aromatic dicarboxylic acid 35 to 10 mol%.
